VOTE HER EKITI

Project Clarifications & Delivery Considerations

Gender Accountability Dashboard

Thank you for sharing the Product Requirements Document for the Vote Her Ekiti Gender Accountability Dashboard. Before development begins, I would like to confirm the points below so that the implementation, data handling, and delivery expectations are clear to everyone.

1. Data, Scoring and Content

1.1 Accountability Index methodology

- Could you provide the approved formula for calculating each of the four scoring dimensions, including how partial scores are awarded?
- When the scoring weights or methodology change, should previously published scores retain the methodology used at the time, or should historical scores be recalculated using the latest rules?

1.2 Appointment categories and the 35% target

- Which appointment categories should count towards the headline 35% representation calculation? Should it include only State Executive Council positions, or also special advisers, board appointments, LGA appointments, and other categories?
- For the headline figures, should removed or reassigned appointments be excluded from the current count while remaining visible in the historical record?

1.3 Data readiness and responsibility

- Will the current appointment list, 1999–2026 historical dataset, ratified Charter, signed pledges, initial scoring data, first bulletin, and research report be available before the relevant development milestones?
- Who will be responsible for supplying, checking, and approving the accuracy of the data and documents before they are published?
- If some data is not available by launch, what wording or expected availability date should be displayed for those sections?

1.4 Content and branding

- When will the official dashboard name, brand colours, SVG logos, partner logos, About-page copy, media contact details, and press-kit assets be supplied?
- Will the Yoruba translations for key labels be supplied if the Yoruba language toggle is included?

1.5 Admin users and publishing workflow

- How many people are expected to use the admin panel, and are the Administrator and Editor roles sufficient?
- Should content be published immediately after an edit, or should some changes require review and approval before appearing publicly?

2. Technical, Hosting and Operational Arrangements

- Who will register and own the domain, and who will pay for hosting, database hosting, file storage, email delivery, analytics, error monitoring, and any other third-party services?
- I will not be responsible for these third-party service charges. Can we confirm that the relevant accounts will be owned or controlled by WTA and that WTA will pay the providers directly? Some of the above services have free tiers, but they are relatively slower to their paid versions.
- Who will manage ongoing content updates after handover, and who will be the primary point of contact for approvals and technical decisions?
- What level of maintenance is expected after the agreed post-launch support period, and should ongoing maintenance be covered by a separate agreement?

3. Delivery Timeline and Acceptance

- The timeline is quite tight, particularly for the MVP due by the end of October. I will make a strong effort to meet the agreed milestones, but timely access to content, data, feedback, and decisions will be essential. Can we confirm which features are absolutely required for MVP acceptance and which can move to a later phase if needed?
- Who will review and sign off each phase, and can the agreed 48-hour review window be maintained so that feedback does not delay subsequent work?
- What are the specific acceptance criteria for each phase, including how functionality, performance, accessibility, and data accuracy will be assessed?
- How should changes or new requests that fall outside the agreed PRD scope be handled, estimated, and approved?

4. Post-Launch Bug Fixes and Support

The PRD includes 30 days of post-launch bug-fix support at no additional cost. I will not be able to provide 30 days of free bug-fix support. I suggest that we agree on a clearly defined support arrangement, including the duration and scope of any included support and the rate or process for additional fixes and maintenance.

For clarity, this does not prevent me from correcting issues covered by the agreed delivery and acceptance criteria before a phase is signed off. It means that post-handover support and maintenance must be agreed separately rather than assumed to be free for 30 days.

5. Suggested Next Step

Once these points are confirmed, I can finalise the technical approach, phase-by-phase scope, and delivery plan. The speed of the project will depend on timely delivery of the required content and data, prompt feedback, and agreement on the MVP priorities.
